ACCELERATING DETECTION AND ELIMINATION OF HPV AND RELATED CANCERS

Congress Presidents: Walter Kinney (USA), Matti Lehtinen (Finland)

EUROPEAN RESEARCH ORGANIZATION ON GENITAL INFECTION AND NEOPLASIA

MTC - MAIN TRAINING COURSE

The main training course is designed to provide summaries of the most relevant knowledge on HPV infection and associated diseases with the aim of assisting physicians and educators.

The topics covered range from the basic science fundamentals to emerging issues and the clinical uses of screening technologies, prophylactic HPV vaccines, the value of HPV detection and extending to HPV-related diseases in external genitalia and head & neck. Speakers will present only accepted evidence-based scientific information that has been published in the peer-reviewed medical literature.

MTC 01 **Trends and specific aspects of HPV driven cancer
(cervix, anus, vulva, penile, oro-pharynx)** **Auditorium Camille Blanc**
Chair: S. Franceschi (Italy), A. Giuliano (USA) **8:15 - 9:45**

The Opening Session will set the pace of what is happening to cancer types related to HPV infection in an era of big changes in prevention strategies for these tumours. Presentations will tackle the evolution of burden of cases and deaths from HPV-related cancers and highlight substantial differences by world region and cancer site. There will be room to compare cancer trends with changes in sexual behaviour and to revisit the natural history of HPV carcinogenesis, that is exquisitely dependent from the type of epithelium infected.

MTC 01-1	International trends in incidence and survival of HPV-related cancers	Shiels M.	USA
MTC 01-2	Epidemiology of HPV infection	Giuliano A.	USA
MTC 01-3	Current knowledge on HPV transmission, sexual behaviour messages	D'Souza A.	USA
MTC 01-4	Carcinogenesis according to epithelial sites Discussion	Doorbar J.	UK

Coffee break 9:45 - 10:15

MTC 02 **Revisiting the progress, practices and implementation
of HPV based screening** **Auditorium Camille Blanc**
Chair: J. Cuzick (UK), W. Kinney (USA) **10:15 - 11:45**

The implementation of HPV based screening programs comes with its own set of problems and opportunities. Experts will share their experience and recommendations in this session.

MTC 02-1	HPV based screening strategies	Cuzick J.	UK
MTC 02-2	Developing useful biomarkers for screening and triage	Jenkins D.	UK
MTC 02-3	Implementation experiences of HPV based screening	Van Dijk S.	Netherlands
MTC 02-4	Screening in vaccinated women	Dillner J.	Sweden
MTC 02-5	Self-screening programs – current experience Discussion	Berkhof H.	Netherlands

MTC 03 **Updating HPV immunization worldwide, the state of the art and new challenges** **Auditorium Camille Blanc**
 Chair: P. Bonanni (Italy), E. Joura (Austria) **13:30 - 15:00**

Prophylactic HPV vaccines have proven to be remarkably safe and effective in population use. In this course, we review the impacts so far, and examine future possibilities in considering the evidence relating to extension of vaccine programs to males, to women post treatment, to immunosuppressed populations, and to adults.

MTC 03-1	Public health impact of HPV vaccines	Hanley S.	Japan
MTC 03-2	Vaccination of boys: the rationale	Bonanni P.	Italy
MTC 03-3	Individual impact of HPV immunization in adults – new developments - post-conization	Joura E.	Austria
MTC 03-4	Individual impact of HPV immunization in adults – new developments - Immunosuppression	Palefsky J.	USA
MTC 03-5	Individual impact of HPV immunization in adults - adult protection Discussion	Bosch X.	Spain

Coffee break 15:00 -15:30

MTC 04 **Recent developments in HPV research** **Auditorium Camille Blanc**
 Chair: T. Broker (USA), M. Goodman (USA) **15:30 - 17:00**

This session is devoted to novel discoveries relevant to HPV carcinogenesis and treatment from the perspective of epidemiology, the laboratory, and the clinic. Few studies of HPV transmission have been conducted, but knowledge of HPV transmission dynamics is necessary to define strategies for disease control and assist in modeling prevention measures. HPV genetic variants have a strong influence on the risk of HPV-associated disease, and HPV16 sub-lineages are heterogeneously dispersed among the world's populations. This is likely a result of the co-evolution of HPV variants, especially HPV16 sub-lineages, with the human diaspora. HPV16 variants differ in viral persistence and disease progression with the A4 lineage showing greater cervical cancer risk in Asian studies; and the D2/D3 lineages showing greater cervical cancer risk in American studies. In addition to studies of viral genetics and type distribution, in recent years great progress has been made in improving vaccine delivery. Advances in nanotechnology will result in more effective and less toxic interventions against HPV-associated cancer. These and other insights into the biology of HPV-associated malignancies will assist with improvements in cervical cancer screening and drug deliver.

MTC 04-1	HPV transmission	Franco E.	Canada
MTC 04-2	HPV variants	Mirabello L.	USA
MTC 04-3	Polymeric nanoparticles for cancer vaccination and targeted drug delivery	Hennink W.	Netherlands
MTC 04-4	New insights in cervical carcinogenesis and implications for screening	Peto J.	UK
MTC 04-5	The diversification of HPV16 is driven by ongoing immune avoidance-related positive selection Discussion	Yeager M.	USA

WS - WORKSHOPS

WS 01 **Workshop HPV immunization**
 Chair: A. Vorsters (Belgium), J. Yarwood (UK)

Room Van Dongen
8:30 - 11:45

HPV vaccination programs are being implemented worldwide, with different degrees of success. For a number of countries the one dose HPV immunization schedule might be an interesting option, whereas other countries want to know whether sexually active women are an indication for HPV vaccination. Increasingly the policy and decision makers, as well as vaccinators and vaccinees want to understand the impact of immunization on the incidence of cervical cancer and cervical cancer elimination.

All this will be presented and discussed during the workshop along with the presentation of a few country HPV immunization examples.

Part I**8:30 - 9:45**

WS 01-1	One dose HPV schedule – a future option?	Kreimer A.	USA
WS 01-2	Vaccination of sexually active women: an indication?	Franco E.	Canada
WS 01-3	HPV vaccine introduction in Asia Discussion	Hanley S.	Japan

Coffee break • 9:45 - 10:15

Part II**10:15 - 11:45**

WS 01-4	Follow-up studies with bi-valent and quadrivalent vaccines in Europe: impact on cervical diseases and elimination	Pollock K.	UK
WS 01-5	Impact of HPV vaccination on the incidence of cervical cancer	Arbyn M.	Belgium
WS 01-6	The HPV vaccination program in the UK: preparation and implementation Discussion	Yarwood J.	UK

FC 08-9	Burden of HPV related anogenital diseases in young women in Germany – an analysis of German statutory health insurance claims data from 2012 – 2017	Mihm S.	UK
FC 08-10	HPV vaccine against CIN3+ is also highly effective in Japan, but still suspended	Konno R.	Japan

WS - WORKSHOPS

Cervical cancer screening quality assurance**WS 02**

Training workshop for cervical cancer screening program coordinators and evaluators on quality assurance in cervical cancer screening.

Chair: S. Lönnberg (Finland), N. Segnan (Italy)

Room Lifar
13:30 - 17:00

Part I**13:30 - 15:00**

Screening and prevention of cervical cancer is undergoing major changes with the deployment of new screening methods and immunization programs. However, screening coverage remains an important determinant for the success of population-based cancer prevention efforts. Many programs still struggle with suboptimal attendance or adherence to the guidelines. This workshop aims to assess the recommendations from the current European guidelines and explore available strategies to improve screening coverage among hard to reach of women, discuss barriers to implementation of the quality assured screening strategies and look for possible solutions.

WS 02-1	Opening - What do we mean with quality assurance and quality improvement?	Lönnberg S. Segnan N.	Finland Italy
WS 02-2	Recommended QA and organization of cervical cancer screening	Lönnberg S.	Finland
WS 02-3	Barriers in attendance and access to quality assured screening	Rezeberga D.	Latvia
WS 02-4	Screening and importance of primary prevention	Armaroli P.	Italy
WS 02-5	How to enroll actively in a cohort never or inadequately screened women	Segnan N.	Italy
WS 02-6	Implementation and findings of primary HPV testing based on screening statistics Discussion	Elfström M.	Sweden

Coffee break • 15:00 - 15:30

Part II - Interactive session**15:30 - 17:00**

Interactive part with presentations from conference participants.

Focus: resolving barriers for effective screening, e.g. on poor coverage or attendance, problems with adherence to guidelines – also in the management of women tested positive – or lack of necessary evaluation research and monitoring. Presentations followed by discussion with the faculty and audience. The following aspects will be covered:

- Efforts to improve organization and fail-safe
- Improving coverage and impact in hard-to-reach population by conventional or new methods, and informed participation
- Plans and results on improving equity
- Synergies with screening and HPV vaccination.

WS 02-1	Low cervical cancer screening programme coverage – how to motivate non-attenders of different age groups?	Rezeberga D.	Latvia
WS 02-2	Interventional study evaluating cervical cancer screening strategies for women in precarious conditions in France	Reques L.	France
WS 02-3	Continuous quality monitoring leads to the identification of non-participation, irregular participation and inadequate follow-up as issues for improving effectiveness of cervical screening	Haelens A.	Belgium
WS 02-4	Evaluation of cervical cancer screening uptake and risk factors knowledge: health beliefs model (HBM)	Haile E.	Belgium
WS 02-5	Cervical cancer prevention and control program in Nepal: a success or failure? Discussion, summary and close	Ghimire S.	Nepal

WS - WORKSHOPS

WS 03	Workshop vulvar and anal diseases			Room Bosio 13:30 - 18:30
Part I - Vulvovaginal syndromes				13:30 - 15:00
Chair: G. Donders (Belgium), J. Paavonen (Finland)				
WS 03-1	Vulvar dermatoses: natural history and risk for malignancy	Jakobsson M.	Finland	
WS 03-2	Bacterial vaginosis	Donders G.	Belgium	
WS 03-3	Aerobic vaginitis	Paavonen J.	Finland	
WS 03-4	Localized provoked vulvodynia: conservative management or surgery?	Tommola P.	Finland	
WS 03-5	Selected case presentations Discussion	Donders G.	Belgium	
Coffee break • 15:00 - 15:30				
Part II - Stump the expert: vulvovaginal and anal neoplasia - what is your diagnosis?				15:30 - 18:30
Chair: J. Bornstein (Israel)				
<p>The approach to diagnosing, classifying and treating a vulvar and anal condition has always been complicated. In the case of HPV-associated lesions and intraepithelial neoplasia, it may be controversial. This time, our course will discuss the approach to vulvar disease by presenting cases with vulvar lesions to a panel of experts. The expert's diagnosis and management will be questioned by the moderators and the audience.</p>				
WS 03-1	Case presentation: vulvar intraepithelial neoplasia – differentiated type	Preti M.	Finland	
		Jakobsson M.	Finland	
WS 03-2	Case presentation : vaginal intraepithelial neoplasia	Vieira-	UK	
		Baptista P.		
		Egawa N.	UK	
WS 03-4	Case presentation : vulvodynia	Paavonen J.	Finland	
		Tommola P.	Finland	
WS 03-3	Case presentation : anal intraepithelial neoplasia Discussion and close	Palefsky J.	USA	

The EUROGIN HPV and Head and Neck Cancer Forum highlights areas of active investigation in the field of HPV and head and neck cancers. It offers a review of the current epidemiologic efforts which focus on the natural history of HPV infection, risk of transmission, screening for early cancer detection, the potential impact of prophylactic HPV vaccines in the incidence of head and neck cancer, the role of HPV in benign head and neck disease. The event evaluates how the differing biology of HPV-HNC leads to a re-assessment of clinical staging and clinical prognostic characteristics. Given the viral etiology of these tumors, sessions address to review immune evasion mechanisms utilized by HPV and the understanding of these mechanisms, with the hope of opening the path to novel immunotherapeutic strategies to reactivate the host immune response against the virus and virally-associated cancer cells.

A dedicated debate session will focus on the controversies regarding the impact of HPV infection on oropharyngeal cancer, including diagnosis, management and decision making.

A special session deals with recurrent respiratory papillomatosis, a benign head and neck tumor caused by HPV infection but which can have a devastating and at times life threatening impact on patients. Taking the lessons learned from HPV-OPC, there is the potential of applying similar therapeutic approaches to this HPV-associated disease.

Immunotherapy represents a promising avenue for the treatment of head and neck cancers, with several treatment regimens showing significant promise in clinical trials. Recent immunotherapy trials will be presented.

HN 01	Head & Neck Forum - Treatment Chair: P. Bossi (Italy)		Room Poulenc 8:15 - 9:45

MSS - MAIN SCIENTIFIC SESSIONS

MSS 01 **Ecology of HPV in the post vaccination era** **Room Prince Pierre**
 Chair: E. Franco (Canada), M. Lehtinen (Finland) **8:00 - 9:30**

The scientific session "Ecology of HPV in the post-vaccination era" seeks to understand the new population biology between oncogenic human papillomaviruses and their human hosts following the strong selective pressure of prophylactic HPV vaccination. The plenary lecture of Melanie Drolet on the prerequisites of anticipated changes in HPV ecology is followed by presentations by David Mesher, Joe Tota and Penelope Gray of respectively observational, individually randomized and community-randomized studies on HPV type-replacement in vaccinated populations, vaccinated individuals and unvaccinated individuals, who are under substantial herd effect. The empirical data will be compared for modeling predictions of Irene Man and Ville Pimenoff about estimating changes.

MSS 01-1	Population-level impact of HPV vaccination programs on vaccine and non-vaccine HPV type sets the stage for changes in HPV ecosystem	Mesher D.	UK
MSS 01-2	Systematic review of analyses of HPV type-replacement following vaccination programs	Mesher D.	UK
MSS 01-3	Evaluation of HPV type-replacement in HPV vaccination trials	Tota J.	USA
MSS 01-4	HPV type-replacement in populations following girls-only and gender-neutral vaccination	Gray P.	Finland
MSS 01-5	Mathematical modeling of HPV type-replacement	Man I.	Netherlands
MSS 01-6	Differential HPV diversity and distribution in the pre- and post-vaccination era Discussion	Pimenoff V.	Spain

MSS 02 **New triage approaches for HPV-positive women, what is the evidence?** **Room Prince Pierre**
 Chair: J. Dillner (Sweden), N. Wentzensen (USA) **9:30 - 11:00**

Primary HPV screening is being widely introduced world-wide. While a negative HPV test provides great reassurance against cervical precancer and cancer, a positive HPV test requires additional triage to decide who needs to be referred for diagnostic evaluation and treatment. Current triage strategies include genotyping for HPV16/18 and cytology, but several new technologies are being evaluated that can improve the clinical performance compared to current standards. This session will summarize the most important novel triage strategies and show the latest data and developments.

MSS 02-1	Extended HPV genotyping	Wright T.	USA
MSS 02-2	Viral methylation	Clarke M.	USA
MSS 02-3	Host DNA methylation and miRNA	Heideman D.	Netherlands
MSS 02-4	Automated dual stain	Wentzensen N.	USA
MSS 02-5	Individual risk assessment for CIN3 in clinical practice Discussion	Kinney W.	USA

SS - SCIENTIFIC SESSIONS

SS 04 **Wider use of HPV self-sampling in screening programs: current practice** **Auditorium Camille Blanc**
 Chair: H. Berkhof (Netherlands), D. Heideman (Netherlands) **8:30 - 9:30**

Self-collection of vaginal samples for HPV testing is nowadays offered routinely in the national cervical cancer screening program in certain countries, and other countries have started trials to evaluate the approach as an alternative for clinician-based screening. This session will address experiences with self-sampling, with a focus on implementation and acceptability.

SS 04-1	The Netherlands : data from the first country offering women the possibility to self-collect samples for HPV testing	Melchers W.	Netherlands
SS 04-2	Improve study : experience with and performance of HPV self-sampling vs clinician-based sampling in women attending regular cervical screening in the Netherlands	Berkhof H.	Netherlands
SS 04-3	Australia: experience with self-sampling from the national cervical screening program	Brotherton J.	Australia
SS 04-4	Sweden : increasing participation in cervical screening by targeting long-term non-attenders	Elfström M.	Sweden
SS 04-5	HPV self sampling: the picture in England	Lim A.	UK
SS 04-6	Malaysia : experience with self-sampling and roll-out as a national program Discussion	Woo Y. L.	Malaysia

SS 05 **Total protection and durability of the HPV vaccines** **Auditorium Camille Blanc**
 Chair: A. Kreimer (USA) **9:30 - 11:00**

HPV vaccines were approved and licensed more than a decade ago, typically based on four years of data on the protection of the vaccines afforded against histologic endpoints. This session aims to summarize the state of the science on the durability of HPV vaccines, with data from both trial- and implementation-settings, and expanding endpoints assessments to include virologic and immunologic.

SS 05-1	Long-term cross-protection afforded by the bivalent HPV vaccine against histologic HPV 16/18 precancers	Tsang S. H.	USA
SS 05-2	Long-term cross-protection afforded by the bivalent HPV vaccine	Porras C.	Costa Rica
SS 05-3	Bivalent HPV vaccine effectiveness in a real-world setting	Palmer T.	UK
SS 05-4	Long-term protection of quadrivalent and nonavalent HPV vaccine against histologic HPV16/18 precancers and effectiveness in a real-world setting	Garland S.	Australia
SS 05-5	Long-term protection by the nonavalent HPV vaccine Discussion	Joura E.	Austria

SS 07-5	Human methylation markers detectable in urine	Steenbergen R.	Netherlands
SS 07-6	Accuracy of hrHPV testing on urine samples Discussion	Peeters E. Arbyn M.	Belgium Belgium

CS - CLINICAL SESSIONS

CS 01	The best strategies to prevent and to follow women after conisation for CIN3 Chair: S. Garland (Australia), J. Paavonen (Finland)	Room Auric 8:30 - 9:30
--------------	---	---

Treatment for cervical precancer is fallible and follow-up essential. In the past cytology was the test of choice but this lacked sensitivity so FU schedules were varied according to histological factors and necessarily involved frequent and repeated testing. Recurrence of CIN is associated with persistence of hrHPV subtypes. On the basis of a number of studies and meta-analyses it is recognized that the negative predictive value of a single hrHPV test at 6 months after treatment is sufficiently high to enable a return to normal screening intervals. Compared to cytology, HPV testing is less specific and further evaluation, in one form or another is required for positive tests.

	Part A		8:00 - 8:30
CS 01-1	HPV testing as a test of cure – what is the evidence?	Redman C.	UK
	Part B: The challenge of HPV vaccination after treatment		8:30 - 9:30
CS 01-2	Understanding the concept and definition of recurrent cervical squamous intraepithelial lesion (SIL)	Strander B.	Sweden
CS 01-3	Disease burden of recurrent SIL	Kalliala I.	Finland
CS 01-4	HPV testing and discrimination of HPV reinfection	Dillner J.	Sweden
CS 01-5	Design of clinical trials of post-treatment HPV vaccination Discussion	Kyrgiou M.	UK

CS 02	Risk and prevention of cervical cancers in post-menopausal women Chair: P. Gravitt (USA)	Room Auric 9:30 - 11:00	
CS 02-1	Review the evidence for cancer and CIN2+ risk in pre- vs. post-menopausal women	Silver M.	USA
CS 02-2	New HPV detection in adult women and men: evidence for new acquisition vs recurrence	Gravitt P.	USA
CS 02-3	Clinical experience in management of HPV-screened birth cohorts previously screened with cytology	Hammer A.	Denmark
CS 02-4	Effect of screening in post-menopause	Sasieni P.	UK
CS 02-5	Strategies for prevention of cervical cancers in post-menopausal women Discussion	Lindström A.	Sweden

MSS - MAIN SCIENTIFIC SESSIONS

MSS 03 **Pro-Con session - hot topics** **Room Prince Pierre**
 Chair: E. Franco (Canada), T. Wright (USA) **14:00 - 15:30**

Point/Counterpoint or Pro/Con debates have been a popular type of scientific session in EUROGIN congresses since the 1990's. They capture the arguments on opposing sides of controversial or hot topics in HPV science and its practical aspects, such as vaccination, cervical cancer screening, and disease etiology. The session in 2019 will showcase debates between camps on five key areas: (I) elimination of cervical cancer, (II) the future of cytology, (III) the meaning of HPV-negative cervical cancers, (IV) age to exit cervical cancer screening, and (V) earliest observation of the impact of vaccination on cervical cancer incidence.

MSS 03-1	Can we eliminate cervical cancer? • Yes • No	Giuliano A. Tota J.	USA USA
MSS 03-2	Will cytology eventually go to the dustbin of cervical cancer history? • Yes • No	Meijer C. Wright T.	Netherlands USA
MSS 03-3	HPV-negative cervical cancers: are they worse clinically? • Yes • No	Jenkins D. Aleman L.	UK Spain
MSS 03-4	Should women over 65 exit cervical cancer screening? • Yes • No	Malagon T. Hammer A.	Canada Denmark
MSS 03-5	Has vaccination already reduced cervical cancer incidence? • Yes • No Discussion	Bosch X. Lehtinen M.	Spain Sweden

Coffee break

15:30 - 16:00

MSS 04 **Vaccinating adult women and men – a new challenge
for populations at risk**
Chair: X. Bosch (Spain)

**Room Prince Pierre
16:00 - 17:30**

From the early HPV vaccine indications in 2006-2007 (girls only, single cohorts, age below 15 / before sexual initiation, three doses required ...) the vaccine indications gradually expanded based on either results of formal trials (male vaccination, widening of the age range, HIV cohorts, MSM, other high risk groups...) or based on clinical observations and educated interpretation of the evidence outside formal RCT (vaccination as adjuvant to treatments for CIN2+ or as part of the management of recurrent respiratory papillomatosis). These novel indications translate the underlying observations that 1) HPV vaccines are highly effective also in adult individuals 2) HPV vaccinated women are predicted to reduce dramatically their lifetime screening requirements increasing the cost effectiveness of the programs 3) HPV vaccines are safe and do not have any formal contraindications. 4) reaching vaccination coverage levels above 50% of the female population generates a very powerful herd protection effect 5) the HPV carriers (i.e. some 10% of the female population and likely much higher among males) are the main source of novel HPV infections and the explanation for the high prevalence observed in virtually all surveys of the general populations. The value of vaccinating HPV carriers in reducing HPV transmission is an important objective to further expand the indications of HPV vaccination.

MSS 04-1	Review evidence from clinical efficacy trials	Garland S.	Australia
MSS 04-2	Review evidence from population effectiveness studies of CIN2+ incidence by age at vaccination	Silverberg M.	USA
MSS 04-3	Review evidence for effectiveness of post-CIN treatment vaccination	Joura E.	Austria
MSS 04-4	The impact of HPV viral latency on vaccine effectiveness - evidence from modeling Trends in sexual behaviour in the British population: insights from the National Surveys of Sexual Attitudes and Lifestyles (NATSAL)	Van Schalkwyk C.	South Africa
MSS 04-5	Discussion	Sonnenberg P.	UK

Methylation: from molecular biology to clinical practice
MSS 05 A - Part A **Room Prince Pierre**
17:30 - 18:10
 Chair: J. Doorbar (UK), M. Von Knebel Döberitz (Germany)

In this course we aim to highlight key regulatory functions of epigenetic modifications of the HPV genome during the normal viral life cycle of papillomaviruses in the differentiating squamous epithelium as well as the critical role of aberrant methylation events of the viral genome in the initiating phase of transforming HPV infections. These recent findings have important implications for innovative diagnostic tools as well as they position HPV triggered epithelial lesions as key target indications for epigenetic therapy approaches. Three talks will discuss these subjects.

MSS 05 A-1	Epigenetics in HPV caused cancers	Steenbergen R.	Netherlands
MSS 05 A-2	Viral epigenome and its implication in viral gene expression regulation	Von Knebel Döberitz M.	Germany
MSS 05 A-3	Therapeutic implications of demethylating drugs Discussion	Prigge E-S.	Germany

Methylation: from molecular biology to clinical practice
MSS 05 B - Part B **Room Prince Pierre**
18:10 - 19:00
 Chair: A. Lorincz (UK)

A general characteristic of progressing epithelial precancers is increasingly diverse and large changes in methylation. DNA methylation biomarker panels are highly reproducible and easy to measure from biopsies, exfoliated cells and body fluids. For HPV-related diseases methylation tests show very good performance and have many advantages versus other triage methods, providing simultaneous information on both diagnosis and prognosis. This session will explore progress in the biology of DNA methylation, the growing impetus for methylation-based triage algorithms and prospects for routine commercial methylation tests.

MSS 05 B-1	Performance of a cocktail HPV DNA methylation test with 12 or more types	Clarke M.	USA
MSS 05 B-2	Routine DNA methylation testing in Colombia, is it feasible?	Sánchez G.	Colombia
MSS 05 B-3	Results of the Qiasure DNA methylation test in routine use	Meijer C.	Netherlands
MSS 05 B-4	Performance of the GYNTECT methylation assay in triage of HPV positive women	Dürst M.	Germany
MSS 05 B-5	Is the S5 DNA methylation test useful as a predictor of CIN3 and cancer in HPV-infected women?	Lorincz A.	UK
MSS 05 B-6	HPV triage – longitudinal studies on host DNA methylation Discussion	Heideman D.	Netherlands

CS - CLINICAL SESSIONS

CS 03 **LLETZ** **Room Auric**
Chair: C. Redman (UK) **14:00 - 15:30**

The session is a multi-faceted review of LLETZ that will consider how and when to perform this procedure and its place in modern colposcopy.

CS 03-1	Teaching LLETZ procedure	Cruickshank M.	UK
CS 03-2	When to treat?	Kalliala I.	Finland
CS 03-3	How to do a proper LLETZ? Depth, problems, etc.	Redman C.	UK
CS 03-4	Select and treat. Indications, evidence	Redman C.	UK
CS 03-5	Follow-up after LLETZ: post LLETZ treatment, TOC, need for colposcopy, cancer Discussion	Aro K.	Finland

Coffee break 15:30 -16:00

CS 04 **HPV assays from practice to research development** **Room Auric**
Chair: M. Poljak (Slovenia) **16:00 - 17:30**

The enormous number of commercial HPV assays on the market complicates choosing the best test for different clinical applications as well as for epidemiological studies and research purposes. The session will provide a global overview of commercially available HPV tests, as well as a summary of those considered clinically validated for primary screening. Quality control requirements for HPV testing and clinical performance of HPV tests on alternative specimens will be also reviewed. Finally, next generation HPV tests currently in the pipeline or in late phase development will be presented.

CS 04-1	Global overview of commercially available HPV tests: 2019 update	Poljak M.	Slovenia
CS 04-2	Validation rules for HPV tests with genotyping capacity	Xu L.	Belgium
CS 04-3	Quality control requirements for HPV testing	Cuschieri K.	UK
CS 04-4	Clinical performance of HPV tests on alternative specimens	Vorstens A.	Belgium
CS 04-5	Next generation HPV tests: what is in the pipeline and what is not (and we desperately need)? Discussion	Franco E.	Canada

CS 05	Age to start and to stop screening and how it will change with HPV Chair: P. Georgi Rossi (Italy)	Room Auric 17:30 - 19:00
--------------	---	---

The introduction of HPV testing and the changing epidemiology of HPV infections due to vaccination require re-thinking the definition of the screening target age: at what age should we start screening, in vaccinated and non-vaccinated women? When should we stop screening in women who had a negative HPV test? In this session both modelling studies and insights from cancer and screening registries from different European countries will be used to answer these questions.

CS 05-1	When to start and stop screening with Pap and HPV: models for policy decision making	Malagon T.	Canada
CS 05-2	When to start and stop screening with HPV testing: the importance of the knowledge on the natural history of the disease	Baussano I.	France
CS 05-3	How data from cancer registries can help to define the age to start and stop screening	Lynge E.	Denmark
CS 05-4	Age to start and stop screening: the UK experience	Sasieni P.	UK

MSS - MAIN SCIENTIFIC SESSIONS

MSS 06 **Towards cervical cancer elimination: what do we need to know?** **Auditorium Camille Blanc**
 Chair: E. Burger (USA), M. Jit (UK) **8:00 - 9:30**

The Director-General of the World Health Organization Director-General has issued a call for action to eliminate cervical cancer as a public health problem. Since then, there has been widespread consultation, debate and analysis around the topic. This session brings together speakers who are at the heart of the discussion around cervical cancer elimination about the rationale, feasibility, action required and timeline to achieve elimination.

MSS 06-1	Elimination of HPV related cancers: ambitious but achievable, examples of success	Giuliano A.	USA
MSS 06-2	Why did WHO call for cervical cancer elimination? The motivation and the evidence	Baussano I.	France
MSS 06-3	Elimination and eradication: do the differences matter?	Jit M.	UK
MSS 06-4	How soon can we eliminate cervical cancer? Comparative modeling of vaccine and screening options	Burger E.	USA
MSS 06-5	What do we know about cervical cancer incidence in the world today?	Bray F.	France
MSS 06-6	Which will be the first country to eliminate cervical cancer? Discussion	Canfell K.	Australia

Coffee break 9:30 - 10:00

MSS 07 **Artificial intelligence: digital pathology and machine learning applications for precision prevention of cervical cancer** **Auditorium Camille Blanc**
 Chair: J. Monsonego (France), N. Wentzensen (USA) **10:00 - 11:30**

MSS 07-1	Digital pathology	Grabe N.	Germany
MSS 07-2	Digital cytology for Pap screening, what is the accuracy?	Bergeron C.	France
MSS 07-3	Machine learning	Antani S.	UK
MSS 07-4	Experience from other oncological imaging (breast cancer)	Balleyguier C.	France
MSS 07-5	Artificial intelligence applications for cervical cancer screening Discussion	Wentzensen N.	USA

Lunch break 11:30 - 13:00

CS - CLINICAL SESSIONS

CS 06 **HPV vaccination and use of new technologies in women at high risk of cervical disease** **Room Auric**
 Chair: J. Dillner (Sweden), M. Kyrgiou (UK) **8:30 - 9:30**

With the widespread use of HPV vaccines, the prevalence of vaccine HPV type infections is dropping, in some populations nearing extinction. The two major vaccine types (HPV16/18) are responsible for 70% of cervical cancers and even more in younger screening populations. In highly vaccinated birth cohorts, both cytology and HPV screening will mostly detect the remaining HPV types that have no or very limited potential to cause cancer. For populations without the most oncogenic HPV types, entirely new screening strategies and new screening tests are required.

CS 06-1	Efficacy of HPV vaccination – benefits in women with previous cervical disease	Kyrgiou M.	UK
CS 06-2	HPV vaccination and impact on prevalence cervical disease in Scotland	Cruickshank M.	UK
CS 06-3	Resource stratified approaches combining vaccination and screening	Sasieni P.	UK
CS 06-4	The use of “omics” innovative technologies to optimise management of women with abnormalities at screening	Paraskevaidi M.	UK
CS 06-5	Genetic and epigenetic determinants in cervical cancer Discussion	Bowden S.	UK

Coffee break 9:30 - 10:00

CS 07 **Cervical neoplasia - Stump the expert (Interactive session)** **Room Auric**
 Chair: J. Bornstein (Israel), E. Paraskavaidis (UK) **10:00 - 11:30**

The approach to diagnosing, classifying and treating cervical intraepithelial neoplasia has changed with recent advances. This time, we will present contemporary cases to a panel of experts. The experts' diagnosis and management will be questioned by the moderators and the audience.

CS 03-1	Case presentation	Redman C.	UK
CS 03-2	Case presentation	Shiraz M. A.	UK
CS 03-3	Case presentation	Sui L.	China
CS 03-4	Case presentation Discussion	Lúa Alvarado R.	Mexico

Lunch break 11:30 - 13:00

SS - SCIENTIFIC SESSIONS

SS 09 **Screening for anal cancer precursors in women** **Room Poulenc**
 Chair: L. Abramowitz (France), J. Palefsky (USA) **8:00 - 9:30**

The global incidence of anal cancer incidence is increasing dramatically in HIV-positive women and men who have sex with men (MSM) Others populations are also at increased risk of anal cancer (1-3), including heterosexual HIV-positive men, HIV-negative MSM, immunocompromised people (including solid organ transplantation), and HIV-negative women with a history of vulvar or cervical cancer, and high-grade VIN/ CIN. Guidance based on expert opinion for screening and treating HIV infected MSM for prevention of anal cancer is available but challenging to implement for many reasons (large screening population, loss to follow-up, long learning curve for high resolution anoscopy, limited availability of resources, limitations of screening technologies and treatment methods, etc. The incidence of anal cancer will likely decrease in the future among vaccinated individuals, but many at-risk individuals will not have been vaccinated and will benefit from cervical screening and probably anal screening. This session focuses on anal cancer prevention in women: what does the current data tell us regarding best practices for anal cancer prevention in at-risk women? Who should be screened? What are the optimal screening methods and algorithms? What do we know about the efficacy of treatment for anal high-grade squamous intraepithelial lesions to prevent anal cancer in women?

SS 09-1	Anal cancer in women - who is at risk?	Shiels M.	USA
SS 09-2	Anal HPV and anal squamous intraepithelial lesions in women - a global perspective	Moscicki A-B.	USA
SS 09-3	Optimal approaches to screening for anal squamous intraepithelial lesions in women	Stier E.	USA
SS 09-4	The ANCHOR study	Palefsky J.	USA

SS 10 **Cervical screening of vaccinated birth cohorts** **Room Van Dongen**
 Chair: J. Bonde (Denmark), C. Cuschieri (UK) **10:00 - 11:30**

Relevance: HPV vaccinated cohorts represent a challenge to both cytology and HPV based screening. How to approach and overcome this challenge to secure the best screening of HPV vaccinated women.

SS 10-1	Australia	Canfell K.	Australia
SS 10-2	Denmark	Waldstroem M.	Denmark
SS 10-3	Norway	Nygård M.	Norway
SS 10-4	How will cervical screening in the UK change over the next 25 years?	Castanon A.	UK
SS 10-5	Sweden	Elfström M.	Sweden
SS 10-6	Design and Implementation of screening programs for vaccinated cohorts Discussion	Malagon T.	Canada

FC 19-7	Effectiveness of a multi-ingredient coriolus versicolor-based vaginal gel in repairing cervical mucosa with HPV lesions. Interim analysis results of an observational study	Cortés J.	Spain
FC 19-8	Evaluating the performance of an artificial intelligence classifier on a colposcopy population	Homola W.	Poland
Lunch break			11:30 - 13:00

MSS - MAIN SCIENTIFIC SESSIONS

MSS 08 **Challenges for HPV self-sampling as primary screening tool in organized cervical screening** Auditorium Camille Blanc
 Chair: M. Elfström (Sweden), S. Van Dijk (Netherlands) 14:15 - 15:45

HPV-tests on self-samples were introduced for non-responders of the national screening program. Now, the Netherlands are exploring options of a wider use of self-sampling in the Dutch cervical cancer screening program. There are quite some challenges to overcome before self-sampling can be a primary screening tool, like validation of HPV tests on self-samples and triage on self-samples. That's what this session will be about.

MSS 08-1	Experiences and challenges for self-sampling in Denmark	Bonde J.	Denmark
MSS 08-2	Challenges for primary self-sampling in the Netherlands	Van Dijk S.	Netherlands
MSS 08-3	Clinical validation of HPV tests on self-sampling (HPV tests/ brushes/medium/etc) on his meta-analyses review publication	Arbyn M.	Belgium
MSS 08-4	Challenges for triage Discussion	Heideman D.	Netherlands

Coffee break

15:45 - 16:15

MSS 09 **Cervical screening programs from a flow-chart point of view** Auditorium Camille Blanc
 Chair: J. Bonde (Denmark), A. Tropé (Norway) 16:15 - 17:45

How to best utilize HPV screening with the many new options this technology offers?
 In this session, screening algorithms from different countries will be presented along with the reasons for the choices made showing how HPV, genotyping, cytology and other methods are combined to provide better cervical cancer screening

MSS 09-1	The Swedish screening program	Dillner J.	Sweden
MSS 09-2	The Norwegian screening program	Tropé A.	Norway
MSS 09-3	The Dutch screening program	Van Dijk S.	Netherlands
MSS 09-4	The Danish screening program	Bonde J.	Denmark
MSS 09-5	The Scottish screening program	Palmer T.	UK
MSS 09-6	The Australian screening program	Brotherton J.	Australia
MSS 09-7	The Italian screening program	Carozzi F.	Italy

MSS 10 Risk-based HPV screening: switching from one-size-fits-all programs to personalized screening programs Auditorium Camille Blanc
17:45 - 19:15
Chair: H. Berkhof (Netherlands), G. Ogilvie (Canada)

Molecular based screening for cervical cancer is now well established as offering improved detection and greater protection for women for pre-cancerous lesions. However, significant unanswered questions remain as to how to optimize screening programs for women with different risk profiles. In this session, leaders in the field will provide reflections on the current thinking on risk based screening with molecular testing for HPV.

MSS 10-1	E-health and M-health platforms to facilitate risk-based cervical screening	Dillner J.	Sweden
MSS 10-2	Towards fully molecular risk stratification	Meijer C.	Netherlands
MSS 10-3	Risk based screening - the US experience	Wentzensen N.	USA
MSS 10-4	When to start screening after vaccination? Intermediate results of a Finnish randomized trial	Lehtinen M.	Finland
MSS 10-5	Epimetheus - an open source platform for risk-based modeling Discussion	Baussano I.	France

SS - SCIENTIFIC SESSIONS

SS 11 Control of high-risk HPV transmission in clinical practice Room Van Dongen
Chair: J. Doorbar (UK) 14:15 - 15:45

Recent studies on virus transmission have shown that human papillomaviruses - which are shed from the epithelial surface in exfoliating squames - are resistant to desiccation in the environment and that effective disinfection procedures must be implemented to inactivate them in clinical settings. Unlike many viruses however, the methodologies for measuring infectious HPV titres are not yet well developed, with the current disinfection protocols used to inactivate HPVs, being drawn to a large extent, from the study of other virus families that have different survival and transmission characteristics.

The session will examine the effectiveness of the common agents that are currently used to inactivate HPV and HPV-contaminated medical implements - in order to allow development of an evidence based approach to HPV inactivation that adequately addresses the possibility of indirect transmission in the clinic.

SS 11-1	Health care associated transmission of infectious agents	Wilson P.	UK
SS 11-2	Papillomavirus stability and the efficiency of disinfection strategies	Egawa N.	UK
SS 11-3	Nosocomial papillomavirus transmission: current controversies in the field	Meyers C.	USA
SS 11-4	Papillomavirus entry, inhibition and approaches for quality management Discussion	Ozbun M.	USA

Coffee break

15:45 - 16:15

SS 12	Therapeutic options for low-risk HPV infection and disease Chair: S. Best (USA), C. Lacey (UK)	Room Van Dongen 16:15 - 17:45	
SS 12-1	Overview of therapeutic drugs for benign and neoplastic HPV lesions	Broker T.	USA
SS 12-2	Laser and adjuvant therapy for low-risk HPV disease	Cuming T.	UK
SS 12-3	Is there a role for L1 VLP vaccines in the treatment of low-risk HPV disease?	Lacey C.	USA
SS 12-4	Vaccinia virus as tools for the treatment of HPV lesions in larynx	Rosales R.	Mexico
SS 12-5	Update on the development of HPV L2 based vaccines	Best S.	UK
SS 12-6	Prospects for direct HPV antivirals Discussion	Broker T.	USA

SS 13	Immune responses to HPV infection Chair: K. Louvanto (Finland)	Room Van Dongen 17:45 - 19:15	
SS 13-1	The role of HLA -alleles and host immunity	Louvanto K.	Finland
SS 13-2	HPV serology – antibodies after natural HPV infection versus antibodies after HPV vaccinations	Eklund C.	Sweden
SS 13-3	Modulation of antigen presenting cell functions during chronic HPV infection	De Vos Van Steenwijk P.	Netherlands
SS 13-4	Cell mediated immunity and HPV persistence	Bonagura V.	USA
SS 13-5	Early HPV infection and immune recognition Discussion	Louvanto K.	Finland

CS - CLINICAL SESSIONS

CS 08 **Management / Colposcopy** **Room Auric**
Chair: J. Bornstein (Israel), D. Jenkins (UK) **13:00 - 14:15**

This session will critically examine the traditional approach to diagnosis and management of cervical abnormalities at the colposcopy clinic and discuss the appropriate integration of HPV genotyping and biomarkers' use in different clinical situations, and the way they are reflected in the different guidelines.

CS 08-1	Can we make pathological diagnosis less subjective and variable?	Jenkins D.	UK
CS 08-2	Role of biomarkers for the clinician in colposcopy: is there a place in the day to day practice?	Paraskevaidis E.	Greece
CS 08-3	Revision of different guidelines in colposcopy (France, USA, Canada, etc.)	Bornstein J.	Israel
CS 08-4	Management of cervical abnormalities in pregnancy	Bouchard C.	Canada
CS 08-5	The value of HPV genotyping in colposcopy practice Discussion	Wentzensen N.	USA

CS 09 **Treatment of anal cancer precursors** **Room Auric**
Chair: A. Nyitray (USA), M. Einstein (USA) **14:15 - 15:45**

Treatment of cervical precancers is highly efficacious in preventing the development of cervical cancer. It is not known if treatment of anal precancers will prevent the development of anal cancer. This session will focus on investigation of treatment approaches for HPV infection and anal neoplasia including therapeutic vaccines, ablation, and topical approaches.

CS 09-1	Host cell DNA methylation markers for the detection of HGAIN and anal cancer	Steenbergen R.	Netherlands
CS 09-2	Novel therapeutic agents for anal HPV and anal squamous intraepithelial lesions	Einstein M.	USA
CS 09-3	Ablative approaches for treatment of anal HPV and anal squamous intraepithelial lesions	Abramowitz L.	France
CS 09-4	Topical approaches for treatment of anal HPV and anal squamous intraepithelial lesions Discussion	Stier E.	USA

Coffee break

15:45 - 16:15

CS 10 **Microbiome** **Room Auric**
 Chair: A-B. Moscicki (USA) **16:15 - 17:45**

The microbiome plays a critical role in human health and disease. Microbial dysbiosis has been shown to be associated with inflammation which can be helpful in control of HPV. On the other hand, prolonged inflammation is associated with cancerous changes. Of the mucosal sites, the cervical-vaginal environment has been the most often studied-but mostly with cross-sectional studies. Longitudinal studies are more likely to be more informative. Few studies have attempted to examine the association between HPV outcomes and the anal or oral microbiome. This session will examine longitudinal studies of the cervical microbiome as well as anal and oral microbiomes and HPV outcomes.

CS 10-1	Anal microbiome	Palefsky J.	USA
CS 10-2	Oral microbiome	Goodman M.	USA
CS 10-3	Cervico-vaginal microbiome CIN2 clearance	Kyrgiou M.	UK
CS 10-4	CIN2 clearance	Mitra A.	UK
CS 10-5	HPV regression vs progression to CIN2 Discussion	Moscicki A-B.	USA

CS 11 **How to act against fake news, anti-vaccination movements and manipulation of public opinion** **Room Auric**
 Chair: E. Karafillakis (UK), M. Nygård (Norway) **17:45 - 19:15**

In 2019, the WHO declared vaccine hesitancy one of the top ten threats to global health. The spread of misinformation around HPV vaccination, facilitated by digital and social media, has contributed to an amplification of public concerns, particularly about the safety of the vaccine. This session will discuss the impact of digital and social media on HPV vaccine hesitancy and strategies that can be implemented to manage and respond to misinformation online.

CS 11-1	Digital and social media: the importance of listening to the public	Karafillakis E.	UK
CS 11-2	Responding to anti-vaccination content on digital and social media: whose responsibility?	Milne C.	UK
CS 11-3	Messaging done right: how to communicate around HPV vaccination	Simas C.	UK
CS 11-4	Navigating digital and social media to reach different populations	Tropé A.	Norway
CS 11-5	Using digital and social media as a positive tool to respond to public concerns Round table discussion	Pollock K.	UK

SS - SCIENTIFIC SESSIONS

SS 14 **HPV based screening for cervical cancer** **Room Auric**
 Chair: K. Canfell (Australia), P. Georgi Rossi (Italy) **8:00 - 9:30**

The session affords some of the hottest topics for new cervical cancer screening based on HPV testing. Which test should be used and how should it be combined with cytology? In a scientific and practice community dedicated to public health interventions, guidelines can only change after consolidated evidence has been accumulated, but at the same time technology and research push for continuous changes and improvements of the interventions. This session gives a picture of how evidences are evolving and recommendations are evolving in cervical cancers screening programs.

SS 14-1	Update of the evidence: HPV alone vs cotesting	Ogilvie G.	Canada
SS 14-2	DNA vs RNA tests: update of the evidence	Forslund O.	Sweden
SS 14-3	Which HPV tests are validated for cervical cancer screening	Arbyn M.	Belgium
SS 14-4	Who is doing what: several countries that have introduced HPV screening or that have defined their future policies Discussion	Giorgi Rossi P.	Italy

SS 15 **Validation of HPV assays for primary screening** **Room Auric**
 Chair: M. Arbyn (Belgium), F. Carozzi (Italy) **9:30 - 11:00**

SS 15-1	VALGENT 4 protocol, validation of HPV assays using SurePath samples	Bonde J.	Denmark
SS 15-2	What is a good HPV16/18 genotyping test?	Poljak M.	Slovenia
SS 15-3	Validation of HPV assays through international co-operation and biobanks	Cuschieri K.	UK
SS 15-4	Validation of assays included in VALGENT 4: the Liferiver Harmonia test	Xu L.	Belgium
SS 15-5	HPV-Risk assay	Hesselink B.	Netherlands
SS 15-6	A comparison between BD Onclarity, Roche Cobas, Agena MassArray HPV and Genomica CLART HPV4	Ejegod D.	Denmark
SS 15-7	New criteria for HPV test validation Discussion	Arbyn M.	Belgium

SS 16 **Update on next generation sequencing research** **Room Auric**
 Chair: L. Mirabello (USA) **11:00 - 12:30**

SS 16-1	HPV methylation	Nedjai B.	UK
SS 16-2	HPV integration	Yeager M.	USA
SS 16-3	HPV genome sequencing	Mirabello L.	USA
SS 16-4	MicroRNA marker discovery by genome-wide small RNA sequencing in HPV positive self-samples	Snoek B.	Netherlands
SS 16-5	Understanding HPV biology & infection: Insights from NGS Discussion	Doorbar J.	UK

FC - FREE COMMUNICATIONS

FC 24	HPV prophylactic vaccines (IV) Chair: L. Boey (Belgium), S. Hanley (Japan)	Room Van Dongen 8:00 - 9:30	
FC 24-1	Comparing HPV vaccination modeled CIN3+ outcomes with real-world evidence	Postma M.	Netherlands
FC 24-2	Safety of the nine-valent HPV vaccine (Gardasil®9) in transplant and HIV patients	Boey L.	Belgium
FC 24-3	Efficacy, Safety, and Immunogenicity of an Escherichia coli produced bivalent human papillomavirus vaccine: an interim analysis of a randomized clinical trial	Wei L.	China
FC 24-4	Reduction in vaccine HPV type infections in young women five years after HPV vaccine introduction in Colombia	Combita A. L.	Columbia
FC 24-5	Reduced HPV vaccination schedule and the risk of genital warts – a population-based study	Baandrup L.	Denmark
FC 24-6	Implementation of HPV Vaccination in a private women health clinic in Lebanon: feasibility and demographics	Jaafar I.	Lebanon
FC 24-7	Vaccination against human papillomavirus in West Africa: experience from Senegal	Gassama O.	Senegal

FC 25	Viral and molecular biology Chair: M. Yeager (USA)	Room Van Dongen 9:30 - 11:00	
FC 25-1	Polymorphism of TP53 as the background of persistent human papillomavirus infection	Kldiashvili E.	Georgia
FC 25-2	Diagnostic accuracy of ZNF582 hipermethylation for cervical cancer precursor lesions: systematic review and meta-analysis	Rosa M. I.	Brazil
FC 25-3	HPV-CCDC106 integration alters local chromosome architecture and hijacks an enhancer by remodelling the 3D genome structure in cervical cancer	Cao C.	China
FC 25-4	HPV-positive cervical carcinoma cells - the effects of HPV copy number and irradiation on the invasion in the human myoma tissue based extracellular matrix models	Tuominen H.	Finland
FC 25-5	Protamine sulfate potently reduces HPV infection by preventing attachment to heparan sulfate proteoglycans	Ozbun M.	USA
FC 25-6	Therapeutic implications of demethylating drugs	Prigge E-S.	Germany
FC 25-7	The effect of demethylation on proliferation and signaling pathways of cervical cancer cells	Li M.	China
FC 25-8	Inhibition of HPV-18 DNA replication by Novan-1000, a novel nitric oxide releasing compound, in epithelial tissue cultures of PHKs	Broker T.	USA

FC 26	Immunology Chair: C. Lacey (UK), K. Louvanto (Finland)	Room Van Dongen 11:00 - 12:30	
FC 26-1	HPV 16/18 – specific memory b-cell responses in women 8 years after vaccination	Lacey C.	UK
FC 26-2	Impaired monocyte/immature Langerhans cell function, increased PGE2 expression, and skewed HPV6/11 adaptive immunity in RRP	Bonagura V.	USA
FC 26-3	The immune landscape is a strong predictive biomarker for clinical outcome in early stage vulvar cancer, irrespective of HPV or p53 status	Kortekaas K.	Netherlands
FC 26-4	High levels of monocytic myeloid derived suppressor cells expressing arginase 1 and loss of TCR- ζ chain in CD4+ and CD8+ T lymphocytes increase the risk of high-grade cervical intraepithelial lesions in hrHPV+ women	Sánchez G.	Columbia
FC 27	HPV screening (III) Chair: A. Hammer (Denmark), A. Tropé (Norway)	Room Bosio 8:00 - 9:30	
FC 27-1	Primary human papillomavirus cervical cancer screening algorithm using onclarity with integrated 16/18 genotyping: baseline and three-year trial results	Stoler M.	USA
FC 27-2	New cervical cancer screening protocol for women vaccinated before screening age: preliminary data from the “consensus” study	Carozzi F.	Italy
FC 27-3	Crude and attributable risks of CIN3+ detection following multiple rounds of HPV testing at kaiser permanente Northern California	Hammer A.	Denmark
FC 27-4	Retrospective analysis of HPV genotyping data in cervical cancer screening in Germany	Tiews S.	USA
FC 27-5	Genotype-specific, persistent human papillomavirus infection is associated with increased cumulative incidence rate for high-grade cervical disease: three-year longitudinal data from the Onclarity trial	Andrews J.	USA
FC 27-6	Human papillomavirus load and genotype-specific prediction of invasive cervical cancer	Hortlund M.	Sweden
FC 27-7	Gradual implementation of HPV screening in Norway: randomisation and real-world evidence	Engesæter B.	Norway

FC 28	HPV screening (IV) Chair: C. Eklund (Sweden)		Room Bosio 9:30 - 11:00
FC 28-1	Psychological effect of cervical cancer screening when changing primary screening method from cytology to high-risk human papilloma virus testing	Andreassen T.	Norway
FC 28-2	HPV 31 baseline performance and risk determination for high-grade cervical disease by onclarity detection	Devin G.	USA
FC 28-3	DNA vs RNA tests: update of the evidence	Forslund O.	Sweden
FC 28-4	Human papillomavirus testing as exit test for cervical cancer screening at age 60-64 years: a Danish register-based study	Schroll J. B.	Denmark
FC 28-5	Libuse trial - algorithm for cervical cancer screening in the Czech Republic with USAge of HPV dna testing with HPV 16/18 genotyping and p16/ki-67 dual-stained cytology	Slama J.	Czech Republic
FC 28-6	Russian first HPV primary screening program in the republic of bashkortostan in action	Olkov I.	Russia
FC 28-7	Clinical evaluation of alinity m HR HPV assay in population-based cervical cancer screening setting	Oštrbenk Valenčak A.	Slovenia

FC 29	Screening methods Chair: D. Ejegod (Denmark)		Room Bosio 11:00 - 12:30
FC 29-1	Expanding the upper age limit for cervical cancer screening- a nationwide cohort study	Tranberg M.	Denmark
FC 29-2	Comparison of co-testing and primary HPV screening strategies in a population-based study of 2,627 women aged 30 years and above	Liang L. A.	Germany
FC 29-3	Clinical value of p16 immuno-cytology in cervical cancer screening: a population-based study	Yan P.	China
FC 29-4	Preliminary data from a Swedish self- sampling study in postmenopaUSAI women	Helenius G.	Sweden
FC 29-5	Primary HPV screening and cervical cytology in HIV-negative and HIV-positive South African women	Botha M. H.	South Africa
FC 29-6	Evaluation of folate receptor-mediated tumor detection as a triage tool for cervical cancer screening	Zhao Y.	China
FC 29-7	Impact of HPV status knowledge on cytology revision (co-test cohort)	Cunha A.	Portugal

CP - COLPOSCOPY COURSE

CP	<p>Colposcopy Course</p> <p>Organized in conjunction with the European Federation for Colposcopy (EFC)</p> <p>Coordinator: A. Singer (UK)</p>	<p><i>Separated registration required</i></p> <p>Room Poulenc</p> <p>14:15 - 17:45</p>
-----------	--	--

CP 1	<p>14:15 - 14:45</p> <p>The normal cervix and the colposcopy examination</p>	Singer A.	UK
-------------	--	------------------	-----------

Colposcopy is the visual examination of the epithelial cervix using either uni or binocular vision. Specific abnormalities associated with both squamous and glandular precancer can be identified especially after the application of a 5% acetic acid solution. After this application the abnormalities become visible as a result to changes in the epithelium and blood vessels in the stroma. These changes occur within an area of the cervix called the transformation zone, an area bounded by the junction of vaginal epithelium and the glandular epithelium arising from the endocervix (canal). Within this area a change occurs in which and glandular epithelium changes to squamous by a process of transformation, called metaplasia. The upper border of this metaplastic change is called the new squamo columnar junction. The inability to see this junction means that abnormality may exist higher up in the endo cervix.

A sample of any abnormality within the transformation zone can be taken by a simple punch biopsy. Abnormality extending into the endocervix above the new squamo columnar junction will need a limited surgical excision of the endocervix. Colposcopy is an essential part of the diagnosis and treatment of cervical precancer. It is indicated in the presence of abnormal cytology or in the finding of a positive HPV report and also when there are clinical symptoms and signs of the early invasive cancer.

CP 2	<p>14:45 - 15:15</p> <p>Update of pathology and cytology for colposcopists</p>	Bergeron C.	France
-------------	--	--------------------	---------------

As molecular evidence increased and was carefully correlated with epidemiologic studies, it is now clear that CIN 1 (e.g. mild dysplasia, usually with koilocytes) represents the histologic correlate for productive HPV infection, while CIN2 (at least for some) but definitely CIN3/CIS are identified as a morphologic indication of HPV oncogene-induced cell transformation. This understanding leads to the return of a binary risk-based managerial approach to cervical pathology: CIN1 lesions are considered low-grade squamous intraepithelial lesions (LSIL) and managed with observation, whereas CIN2/CIN3/CIS lesions are lumped together as high-grade squamous intraepithelial lesions (HSIL) and warranted resection.

This two-tiered risk schema informed the Bethesda classification system for cervical cytology, first introduced in 1988 and refined 3 times, most recently in 2014. In 2012, the Lower Anogenital Squamous Terminology (LAST) project further advocated for the use of LSIL/HSIL terminology not only in the uterine cervix, but also elsewhere in the male and female genital tracts, as did the 4th edition of the World Health Organization's text on gynecologic neoplasia. Thus today, we have a unified, biologically based terminology for both cytology and histology that extends to the whole spectrum of cervical neoplasia and helps to guide management.

CP 3	<p>15:15 - 15:45</p> <p>Colposcopy of "abnormal" cervix</p>	Singer A.	UK
-------------	---	------------------	-----------

The epithelium containing squamous precancer within the transformation zone has certain characteristics. These reside within the epithelium or in the presence of blood vessels penetrating the epithelium and existing in the underlying stroma. The epithelium when painted with a solution of 5% acetic acid takes on a white appearance due to the obstruction of reflected light from the underlying stroma due to the cellularity of the epithelium. This epithelium is now called aceto-white epithelium and has all degrees of whiteness from a partially translucent appearance to one with extreme white denseness. The blood vessels can appear as red spots on the white epithelial background and this change is called punctuation. Likewise a mosaic appearance in the epithelium is also associated with abnormality and is called mosaic change. Both changes are as a result of increasing epithelial vascularity. An extreme form of this vascularity is called atypical vessel formation where the previous regularity in the blood vessels (punctuation and mosaic) now becomes extreme in structure and adopts a marked irregularity, usually is indicative of possibly early invasive cancer (microinvasion).

Coffee break

15:45 - 16:15

CP 4 **16:15 - 16:45**
The accuracy of colposcopy: how can we make it better? **Redman C.** **UK**

Colposcopic performance is multifactorial and very much depends on context. A variety of studies have shown variable accuracy and concerns have been expressed about its sensitivity to detect HSIL in the presence of LSIL cytology. The prevalence of HSIL is a major determinant in PPV and this will inevitably fall in primary HPV screening, especially if the population is vaccinated. In addition to high quality colposcopy based on training and quality assurance, performance might be improved using adjunctive colposcopic technologies.

A fundamental role of activity in women with abnormal screening results is to make an accurate assessment of the cervix. A number of studies, both cross-sectional and prospective, indicate that whilst colposcopic performance compares favorably with other diagnostic tests, it lacks sensitivity and specificity. It is evident that a number of factors have to be considered: the number of biopsies taken, the prevalence of high grade disease in group being studied and the quality of training. These aspects are reviewed and strategies to improve performance are discussed.

CP 5 **16:45 - 17:15**
The value of biomarkers in colposcopy practice **Bergeron C.** **France**

p16 immunohistochemistry is the most widely enlisted biomarker in the uterine cervix and in the HPV-related neoplasia in general. Biologically high grade lesions, e.g. true precancers are virtually always p16 positive. The LAST recommendations therefore advocate for p16 application in all cases of suspected CIN2 as a way of minimizing CIN2 cases as well as cases with a differential diagnosis of CIN3 vs. benign (atrophy, squamous metaplasia, etc.). Although the diagnostic value of p16 immunohistochemistry in the uterine cervix is well-established in these scenarios, p16 falters when it comes to prognostication and is not considered a reliable prognostic marker in LSIL histological cases.

Using a combination of antibodies to detect p16 and the cell cycle marker Ki67 identifies HPV-transformed cervical cells. The clinical performance of this approach has been evaluated in the triage of ASC-US and LSIL cytology results and more recently in HPV-primary screening. Cytology informed of HPV positivity is more expected to perform better than predicted by trials and could possibly allow longer intervals before retesting HPV-positive women with normal cytology. Alternative triage strategies like combining genotyping (16/18 only vs extended genotyping) with cytology, p16/ki67 dual stain ICC or methylation analyses are all under active evaluation for optimization of the balance between immediate referral vs deferred assessment of HPV positive women. Sensitive than blind cytology. Screening programs with informed cytology triage are expected to perform better than predicted by trials and could possibly allow longer intervals before retesting HPV-positive women with normal cytology. Alternative triage strategies like combining genotyping (16/18 only vs extended genotyping) with cytology, p16/ki67 dual stain ICC or methylation analyses are all under active evaluation for optimization of the balance between immediate referral vs deferred assessment of HPV positive women.

CP 6 **17:15 - 17:45**
Towards the safe and accurate treatment of cervical precancer **Redman C.** **UK**

Colposcopy decisions are inherently based on judgement, hopefully underpinned by a sound understanding of the context and disease processes. Treating cervical pre cancer involves achieving a balance between effectiveness and the avoidance of needless harm. Factors associated with colposcopic accuracy (case mix, number of biopsies, training and quality assurance) and ways of improving performance are considered.

Local cervical treatment in women with suspected cervical precancer is relatively easy to do but can have appreciable morbidity, especially on both future childbearing and the ability to accurately perform adequate follow-up tests. It is important that colposcopists consider when treatment is needed and how it can be undertaken in such a way as to be effective but avoid over-treatment. This encompasses issues such as depth of excision, avoidance of needless treatment especially in younger women whose cervical disease may be self-limiting. These issues will be addressed on the basis of extant evidence with recommendations for safe practice.

GR - IMPROVING GENITAL QUALITY OF LIFE IN HEALTHY WOMEN AND FOLLOWING HPV RELATED CANCER - The role of Genital Restoration

GR 01	Improving genital quality of life in healthy women and following HPV related cancer		Room Lifar 14:00 - 14:55
GR 01-1	General Introduction	Berreni N.	France
GR 01-2	New technologies in genital restoration - applications to functional and plastic gynecology	Berreni N.	France

P 26-1	Clinical feature and HPV prevalence in vulvar intraepithelial neoplasia	Jeon S.	South Korea
P 26-2	Prevalence of HPV and p16 expression in vulvar squamous cell carcinoma: a population-based danish study of >1,500 cancers	Thomsen L. T.	Denmark

P 28 Oral HPV infection

P 28-1	Natural history of oral human papillomavirus infection in healthy populations: design of the prevalence of oral HPV infection, a global assessment, the progress study	Morais E.	France
---------------	--	------------------	---------------

P 29	HPV and oropharynx / Head and neck cancer		
P 29-1	Genomic characterization of clonal evolution during oropharyngeal carcinogenesis driven by HPV 16	Kim J-H.	South Korea
P 29-2	A retrospective study of intra-arterial chemotherapy with concurrent radiotherapy for resectable locally advanced HPV-positive oropharyngeal carcinoma	Aga M.	Japan
P 29-3	The influence of human papillomavirus on nasopharyngeal carcinoma in Japan	Yoshizaki T.	Japan
P 29-4	Changes in incidence and prevalence of human papillomavirus in tonsillar and base of tongue cancer during 2000-2016 in the Stockholm region and Sweden	Holzhauser S.	Sweden
P 29-5	Ectopic chromosome around centrosome (ECAC) as a potential marker of human papillomavirus (HPV) infection on oropharyngeal carcinoma	Kobayashi E.	Japan
P 29-6	Predictive value of 18F-FDG metabolic tumor volume and total lesion glycolysis for systemic metastasis in tonsil cancer	Kim S-Y.	South Korea
P 29-7	Attributable fraction of HPV related head and neck cancers in the recurrent / metastatic setting. A literature review of PHI-III clinical trials	Athanasopoulos C.	Greece
P 29-8	Familial association of oropharyngeal and anogenital HPV-cancers is calendar-time dependent	Lehtinen M.	Germany
P 29-10	DRH1 - Evaluating a blood-based marker for HPV16-induced tumors	Weiland T.	Austria
P 30	HPV and associated skin diseases		
P 30-1	Determination of caUSAtive human papillomavirus type in histologically confirmed common warts, based on estimated viral loads	Fujs Komloš K.	Slovenia
P 31	Genital warts		
P 31-1	Characteristics of human papillomavirus 6 and 11 infection in anogenital warts and corresponding hair follicles over the period of two years	Hošnjak L.	Slovenia

P 35 Advocacy, acceptability and psychology

P 35-1	Safety first: elderly women's experiences with HPV testing, cytology and colposcopy, and views on preventive treatment for cervical cancer	Gustafson L. W.	Denmark
P 35-2	Increasing screening uptake: training Japanese nurses to perform cervical screening	Kudo R.	Japan

P 38 Public health

P 38-1	Evolution of the HPV vaccine coverage in France: a French claims data study	Dominiak G.	France
P 38-2	Knowledge and attitudes to hpv vaccine in a group of women who participated on a cervical cancer prevention campaign	Tatti S. A.	Argentina
P 38-3	Modeling for predictors of knowledge score on aetiology and prevention strategies for cervical cancer among women of reproductive age in Ibadan	Morhason-Bello I.	Nigeria
P 38-4	Japan and UK collaboration to support HPV based interventions for the prevention of cervical cancer	Hanley S.	Japan
P 38-5	Topical therapeutic drugs are essential to reducing the extreme global disparities in human papillomavirus diseases and deaths	Broker T.	USA
P 38-6	Human papillomavirus (HPV) prevalence and genotypes distribution in the general female population of southern Croatia (Dalmatia county)	Kaliterna V.	Croatia

P 39 Fertility and HPV

P 39-1	Human papillomavirus infection in men from couples treated for infertility and its Impact on fertility outcome	Jaworek H.	Czech Republic
